Efficient Tunnel Production – at a proper quality

Abstract.

- The vision for effective tunnel production is that tunnel production in the future will become cheaper, faster and safer, is environmentally friendlier, with better durability and less need for repair and without disturbance for the users during required repair.
- Effective tunnel production is influenced by many factors as:
 - Equipment used.
 - Skill of labour and organisation.
 - Technical requirements.
 - Environmental requirements.
 - Contractual requirements .

The development of those factors will be addressed and some proposals for changed requirements will be raised for discussion.
